

WHY IS AHA eLEARNING RIGHT FOR MY ORGANIZATION?

eLEARNING

Gives students the flexibility to learn anywhere and at anytime! Courses are fully self-directed online, and do not require a separate skills testing.

BLENDED LEARNING

Combines eLearning with a hands-on skills session. The skills session is completed in person with an AHA instructor or using a Voice Assisted Mankin (VAM), where available.¹

¹For American Heart Association courses that include psychomotor skills such as CPR, students must complete a hands-on session to obtain an AHA course completion card.

BENEFITS FOR YOUR ORGANIZATION

AHA eLearning and blended learning can be implemented with almost every kind of organization. AHA eLearning courses are a great option to meet your training needs. For more information specific to your type of organization, contact your AHA Account Specialist.

BENEFITS FOR YOUR STUDENTS

Learning styles vary between students and you may discover eLearning meets the needs of some, while others prefer classroom training. Here are a few of the reasons for maintaining AHA eLearning, reported by AHA Training Centers:

QUALITY OF TRAINING

Material in eLearning courses is developed through AHA science research, and the *AHA Guidelines for CPR and ECC* are a proven source of quality.

CONSISTENCY

Each student receives the same experience and can review the topics they find challenging as many times as they need, which increases their confidence and mastery of skills.

CONVENIENCE

A student can complete most if not all the course online (depending if it is a blended learning or eLearning course).
